The geology and landscapes of the Anglesey Geopark are best exposed around the coastline. A recently developed long distance coastal footpath (200km) provides easy access and attracts a large number of tourists. On behalf of the Geopark I have recently published a guide to the rocks, geological structures, landscape and environment on view along this footpath. Aimed at the general public, it integrates geology with other interests of walkers, ramblers, archaeologists, bird watchers etc.

**Keywords:** education, landscape, geoheritage, geotourism
